

NDM Centre for  
**Global Health Research**

The NDM Centre for  
Global Health Research is  
building a **global health  
community** through equitable  
partnerships and collaborations  
that promote **knowledge sharing**  
and **mutual learning**. Together  
we will improve health  
**for everyone.**

Every year, lack of knowledge and poor disease management results in **millions of people dying and many millions more suffering globally, especially in low and middle-income countries (LMIC)** from conditions that can be prevented or treated.

Despite this, the world's research effort is focused predominantly on the health of high-income country populations while by far the greatest burden of preventable mortality and morbidity is in disadvantaged populations and low resource settings.

**Building capacity** and **supporting research leaders** in LMICs is central to our contribution to collective research efforts tackling health issues that affect the most disadvantaged.

## THE NDM CENTRE FOR GLOBAL HEALTH RESEARCH INCLUDES

- Africa Oxford Initiative (AfOx)
- Antimicrobial Resistance, Antimicrobial Consumption and Burden Estimation (MICRoBE)
- Drug resistant infections and disease dynamics (DRlaDD)
- Health systems collaborative
- Infectious Diseases Data Observatory (IDDO)
- International Health and Tropical Medicine MSc
- Medicine Quality Research Group (MQRG)
- The Global Health Network (TGHN)
- Tropical Immunology

Our wider network includes our well-established partnerships and collaborations within the Africa and Asia Programmes and beyond.

## An enabling environment for globally connected health research

The NDM Centre for Global Health Research enables **networking, collaborating, and sharing**. The Centre comprises internationally recognised research groups, as well as Principal Investigators working in key areas of global importance and offers MSc, Diploma and DPhil/PhD level training.

Our vision is of a global health community working together to transform health for everyone, especially the most disadvantaged.

The NDM Centre for Global Health Research is tackling **current and emerging threats** to health. Our world-leading research is identifying, increasing understanding of, and developing solutions to some of the world's most serious health challenges through global partnerships.

Our strategic cross-cutting platforms are providing further opportunities for us to work together to tackle the wider issues currently impacting global health. These **global health challenge** platforms are focused around:

- Better data and evidence.
- Sharing knowledge and strengthening capacity.
- Innovation and implementation.
- Enhancing policy and practice.
- Strengthening health and research systems.
